Letter of Invitation

August 8, 2012

Dear

1. **Simultaneous Transmitter Operation:** please provide a statement indicating that this EUT is either capable of simultaneous WLAN and BT transmitter operation or not. If the EUT can operate both transmitters simultaneously, we will need an attestation letter indicating that that the unit has been evaluated in simultaneous operation mode and meets all appropriate requirements found in 47 CFR Part 15 **AND meets all MPE and SAR limitations**. Please include all calculations for the MPE evaluation
→ It is not available to use bluetooth and WiFi at the same time.
2. **The manufacturer must provide an attestation statement (letter or RF exposure exhibit) to explain how the device is used. It should be described whether it can be operated (=transmit) next to the body using a body-worn accessory, next to the head, or whether it is only hand operated. For these various operation modes, it must be described the separation distance between the device and the body/or head.** This information will determine the applicable SAR test exemption criteria according to KDB447498 D01 Mobile Portable RF Exposure v04:
→ The RF module is away from head for more than 5cm.

Sincerely Yours,

WON CHANG KIM / HW team Manager
